DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A, a sensing system adapted to measure any physical parameters of the sampled fluid having one sensor and one filter, drawn to claims 1-3, 9, and 17-19.

Species B, a sensing system adapted to measure any physical parameters of the sampled fluid having two sensors and two filters, drawn to claims 4-8.

Species C, a sensing system adapted to measure any physical parameters of the sampled fluid having plurality of sensors and filters coupled to the fibers as shown in Figure 5, drawn to claim 13.

Species D, a sensing system adapted to measure any physical parameters of the sampled fluid having an interrogation device optically coupled to the fiber, having a single sensor and a single filter, wherein the interrogation device is adapted to generate a test optical signal and to detect the optical response from the tested optical signal, drawn to claim 10.

Species E, a sensing system adapted to measure any physical parameters of the sampled fluid having an interrogation device optically coupled to the fiber for a first and a second sensor wherein the interrogation device is adapted to generate a test optical signal and to detect the optical response from the tested optical signal, drawn to claims 8, and 15-16.

Art Unit: 2883

Species F, a sensing system adapted to measure any physical parameters of the sampled fluid having an interrogation device optically coupled to the fiber for each one of the sensors in a set of plurality of sensors; wherein the interrogation device is adapted to generate a test optical signal and to detect the optical response from the tested optical signal, drawn to claim 14.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed Species A-C and a single disclosed Species D-F for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 17 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2883

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show the second filter in the embodiment of the sensing system having two filters and two sensors as claimed, for example in claim 6. Please clarify this matter in the drawings or in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not

accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claim 4 is objected to because of the following informalities: "the second sensor" lacks antecedent basis. Appropriate correction is required.

Conclusion

The method step, as claimed in claim 20, is not restricted because the method teaching the coupling of an optical device to an optical fiber is inherent in the assembly of the product, thus renders claim 20 not patentably distinct from the product claims 1-19.

The Examiner respectfully reminds the Applicant that claim 12 is a non-statutory double patenting with regard to issued patent US 6,321,010 B1. The Examiner suggests the applicant to cancel claim 12 to avoid a double patenting rejection thus will expedite prosecution.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erin D. Chiem whose telephone number is (571) 272-3102. The examiner can normally be reached on Monday - Thursday 9AM - 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on (571) 272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
